TO FEED OUR PEOPLE WE MUST FIRST FEED OUR SOIL

The **AfricaFertilizer (AFO)** initiative is the premier source for fertilizer statistics and information in Africa. Set up in 2009, AFO is hosted by the **International Fertilizer Development Center (IFDC)** and supported by several partners, including the **International Fertilizer Association (IFA)**, on fertilizer trade and fertilizer use by crop studies, the **Bill and Melinda Gates Foundation (BMGF)** through **Development Gateway (DG)** as partner for data visualization, **Argus Media** as partner for international fertilizer prices, comments, and reports and **USAID's Bureau for Resilience and Food Security through the Feed the Future Soil Fertility Technology Adoption, Policy Reform, and Knowledge Management under the Sustainable Opportunities for Improving Livelihoods with Soils (SOILS) Consortium** for monitoring tools such as the AfricaFertilizer Watch.

AFO seeks to provide clear, relevant, and opportune data and market information on fertilizers in the sub-Saharan African region, to support the implementation of continental, regional, and national agricultural and more specifically fertilizer policies and regulations, and promote the growth and development of competitive markets, to the benefit of both the

public and private sector, and fertilizer stakeholders globally. AFO has been working closely with the **Feed the Future Enhancing Growth through Regional Agricultural Inputs Systems (EnGRAIS)** project, implemented by IFDC, and the **West Africa Fertilizer Association (WAFA)** in collecting, processing, and publishing fertilizer production, trade, and consumption statistics and prices for the main fertilizer markets in West Africa.

Currently, AFO has a five-year partnership agreement with WAFA to work on fertilizer statistics and prices in West Africa, and a three-year partnership with DG to develop the **Visualizing Insights on Fertilizer for African Agriculture (VIFAA)** dashboard for 8 African countries out of which [Ghana](#), [Nigeria](#), and [Kenya](#) are already live with Ethiopia, Senegal, Zambia, Malawi and Mozambique coming online as from this year. AFO publishes a monthly **Africa Fertilizer Watch** to monitor fertilizer situations across Africa, in terms of the impacts from surging global fertilizer prices, availability, and affordability, and also publishes a quarterly e-newsletter (FertiNews) to provide up-to-date information on the fertilizer industry in Africa.

West African Fertilizer Association
Association Ouest-Africaine
de l'Engrais

The West African Fertilizer Association (WAFA) is the umbrella association of private sector players of the West African fertilizer industry, including fertilizer manufacturers, importers, blenders, and traders. The association serves as a platform for cooperation amongst its members to find sustainable solutions to fertilizer market challenges and promote best practices in fertilizer production and use to optimize the potential for crop production and food security of the ECOWAS Member States. Formally inaugurated in 2016 and governed by a nine-member board, the association has rapidly grown in size and function and has become the voice of the private sector of the fertilizer industry. The members of the association represent over 85% of the fertilizer trade in West Africa.

Development Gateway (DG): An **IREX Venture** is an international non-profit organization that has researched data ecosystems, built technical tools, and advised on data strategy to strengthen data-driven decision-making across more than 70 countries worldwide, for nearly two decades. DG is the lead implementer of Visual Insights on Fertilizer for African Agriculture (VIFAA), a six-year program funded by the Bill & Melinda Gates Foundation. Through VIFAA, DG is developing custom country dashboards and a new AFO portal while supporting AFO's growth into the leading provider of fertilizer data and information for sub-Saharan Africa.

SPONSORS OF THE 7TH EDITION

AGI Fertilizer Systems produces dry and liquid fertilizer handling products, consisting of a wide range of premium bulk blending and material handling equipment that is shipped worldwide for agricultural use. We are a full-service company with extensive knowledge providing project design, engineering, production, installation, transportation and technical assistance personnel to meet the demands of the client. The AGI Fertilizer Systems Sales and Engineering team works closely with its customers to design material handling systems to better suit their requirements for improved efficiencies and cost benefits.

For more information on the AGI Fertilizer Systems product line, please visit www.aggrowth.com/fertilizer or e-mail fertilizersystems@aggrowth.com.

Based in the Netherlands, **EMT** is a global supplier of blending, bagging, coating and transport equipment for fertilizer industry, EMT has installed more than 500 machine lines in 74 countries, including more than 20 countries on the African Continent. All machines are tailor-made to meet the precise requirements of the customer's set-up. With the possibility to place blending and bagging lines inside containers, the user has a lot of flexibility to place and replace the machines.

EMT's customers include producers, exporters, importers, distributors, and wholesalers of fertilizers or bulk products.

Bagtech started its journey in the 80's in African agribusiness industry, and nowadays with more than 35 years of expertise, the company is a market leader in supplying fertilizer machines equipped with online control, through Bagtech Automation System, in the African continent. We have reached over 120 successful projects delivered and more than 40 consulting and services offered across Africa and the World.

The company offers a wide range of products and solutions for bagging, blending, coating, screener, compact and mobile plants as per customer needs. All machines provide live & online monitoring system enabling to change settings accessible from anywhere on your laptop. Besides machines, the company offers handling fertilizer services from consultancy, management and stock control of full operation.

fertilizer production

shifting from grey ammonia to other colors, and considering alternative applications of ammonia

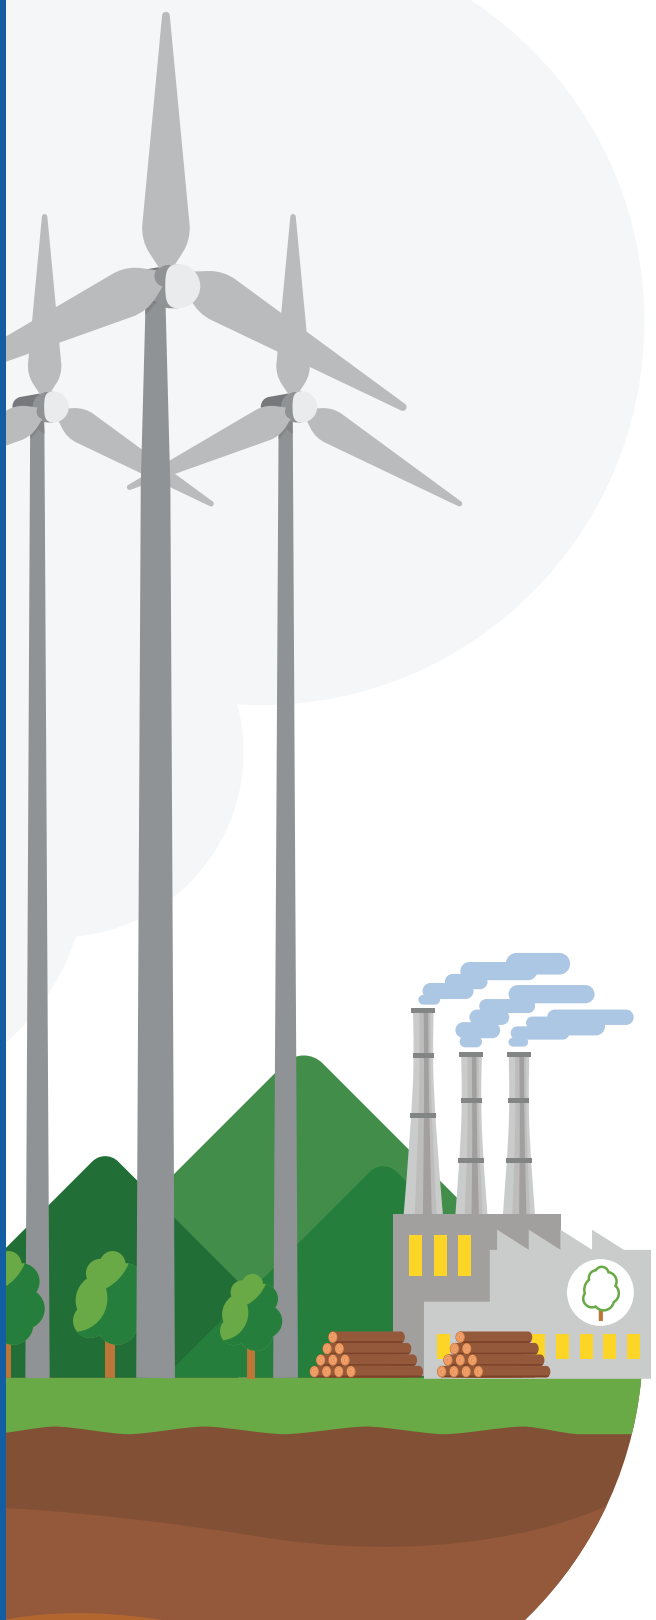

One hundred years ago, during another global food shortage, ammonia helped to revolutionize the world. Now, as nitrogen fertilizer production aims to achieve near-zero carbon emissions to combat climate change, technology is poised to play a major role to save the planet again.

In the early 20th century, the German chemist Fritz Haber uncovered an efficient process for making ammonia out of hydrogen and nitrogen. His Nobel Prize-winning innovation, which led to the production of nitrogen-based fertilizers, transformed global agricultural production and has helped to feed billions every day ever since.

Today, about 1.3% of the world's CO₂ emissions come from ammonia production and about 2% of the world's energy is needed for the synthesis of it. If ammonia was a country, its carbon footprint would be equivalent to that of South Africa. This is certainly not a small task for our generation.

That is why the International Fertilizer Association (IFA) partnered with the International Energy Agency to develop a global [Ammonia Technology Roadmap](#), which was jointly presented at the 2021 UN COP 26 in Glasgow. This guide explains how nitrogen fertilizer producers can reduce up to 90% of CO₂ emissions from ammonia production between now and 2050. It identifies both the technologies and policies needed to enable a deliverable, sustainable, low-carbon transition in nitrogen fertilizer production in line with the 2015 UN COP 21 Paris Agreement.

The country of Egypt, for example, is a major nitrogen fertilizer producer, exporter and user. Its government and the local industry have been inspired by the global Roadmap and decided to publish their own low carbon pathway by mid-2023. A first glimpse of this local Roadmap was provided at the 2022 UN COP 27 in Sharm El Sheikh. From a technology perspective, decarbonization of production demands a move from grey ammonia (primarily using natural gas) to other colors, including above all green ammonia (using renewable energy) and blue ammonia (capturing, using or storing CO₂).

SUSTAINABLE

In addition, carbon emissions from local fertilizer end use also need to be reduced in order for Egypt to reach its net zero emissions goal by 2050. The recent [Scope 3](#) guide produced by IFA and sustainability consultants SystemIQ will serve as the basis for that downstream exercise. This report prioritizes the improvement of nutrient use efficiency (NUE) by increasing crop yield per nutrient unit applied and by supporting adoption of controlled-release and stabilized fertilizers as the main options.

Something that all fertilizer Roadmaps had in common up to now is that their development was financed by external investors. In the case of the global and the Egyptian Roadmaps, the European Bank for Reconstruction and Development (EBRD) covered all costs, for two main reasons: 1) the decarbonization of ammonia production will be costly – more costly than the fertilizer industry is likely to be able to afford and 2) the EBRD and other organizations want to invest into decarbonization (above all in developing countries) but cannot do so without independent pre-assessments.

In addition to being one of the building blocks of modern-day agricultural productivity, ammonia also offers promising applications in the green energy transition. Low carbon ammonia has the potential to become an alternative energy source for long distance shipping, for domestic power generation and as a hydrogen carrier. No doubt, this

will be an increasingly exciting space for ammonia producers and users to monitor in the future.

The sustainability transformation of the fertilizer industry will be full of challenges and opportunities in the coming decades, but as Fritz Haber's century-old discovery has proven to us before, technology innovation can rise to historic challenges. Once again, not because it wants to (solving a global hunger crisis in the 20th century) but because it must (saving the planet in the 21st century). ■

DID YOU KNOW THAT IFA IS TRACKING MORE THAN 50 GREEN AMMONIA PROJECTS?

IFA's 2022 capacity survey indicated that of the green ammonia projects currently underway, 1.8 Mt of ammonia capacity could be commissioned by 2026. This would account for 0.8% of global capacity. However, there are many more projects in the pipeline. If all the projects currently being tracked by IFA were to materialize, it is forecast that green ammonia operations could total almost 60 Mt in 2028, accounting for 20% of the global total.

Reducing greenhouse gas emissions is an essential part of IFA's overall mission to help feed the world sustainably. To find out more about IFA's sustainability work, visit their website www.fertilizer.org

DID YOU KNOW THAT IFA RUNS ITS OWN ONLINE SUSTAINABLE FERTILIZER ACADEMY?

IFA and its 400 members in 70 countries are passionate about sustainability as an opportunity, not just a challenge. Corporations have a significant role to play in shaping sustainable development goals. There are increasing public expectations that businesses will lead the way in tackling critical environmental and social issues, however it is not always obvious where to turn to for clear, professional and practical information about sustainability.

Through its brand-new Sustainable Fertilizer Academy (SFA), IFA provides a unique e-learning experience and network for fertilizer industry professionals to learn about sustainability – from sourcing to production to use of fertilizers on the farm – and to enable them to apply their learning to the real-world challenges facing us all today. Visit www.ifa-sfa.org for more SFA details.

Shamrock Blender

- * Capacity of 25 to 70 ton/m³ per hour.
- * Machine size 4,5-5,4-7-9-11,5-14 ton.
- * Easy and gentle blending process.
- * Blending and weighing are separated.

Weighcont Blender

- * Capacity of 20 to 200 ton per hour
- * Unlimited number of hoppers.
- * Computer controlled.
- * Custom built.

Small Bag Portable Container

- * In two 20 foot/6 meter containers
- * Capacity 80 to 100 ton per hour
- * 1800 bags of 25 or 50 kg per hour

Portable Container FIBC Big Bag Fill System

- * Capacity: 150 ton per hour: 250 big bags of 500-600 kg or 120 bags of 1000 -1500 kg per hour.
- * Easy to install on any decided place.
- * Usable at ship discharging places or inside buildings.

Small Bag Environmental Closed

- * 25 to 50 kg bagging system, fully closed, with two weighing scales.
- * Automatic bag fill system for 15 to 50 kg bags.
- * Capacity is 40 to 50 ton per hour, 800 to 1000 bags per hour.
- * Completely dust closed.

Vertical Blender

- * Capacity of 20 to 60 ton/m³ per hour
- * Machine size 5.5 - 7 - 9- 11.5 and 14.5 ton/m³ per batch.

Small Bag Portable Container

- * In two 10 foot/3 meter containers.
- * Capacity 45 ton per hour.
- * 900 bags of 25 or 50 kg per hour.

High Speed Bagging Line

- * For big bags - jumbo bags.
- * Capacity 50 to 70 ton m³ per hour.
- * 120 kg to 1250 kg bags.
- * Suitable for granular and powder materials.
- * Available with dust reducing system.

INTRODUCTION

This Register of Fertilizer Manufacturing and Processing Facilities in sub-Saharan Africa (SSA), excluding South Africa, monitors and maps all operational fertilizer producing plants, indicating the available name-plate production capacity in the region. The register also captures information on upcoming projects on fertilizer plant installations. The details are obtained by AfricaFertilizer (AFO) directly from fertilizer companies by use of questionnaires and/or from secondary data.

- **Manufacturing plants:** These are plants which undertake some type of chemical reaction to produce fertilizer. Typically, these are large specific product plants such as Urea, Ammonium Nitrate, Phosphoric Acid plants, etc.
- **Processing plants:** These are plants which use premanufactured products to formulate final products for end use. Typically, these are blending and steam granulation plants.

- **Organic plants:** These are plants that derive fertilizers from animal matter, animal excreta (manure), human excreta, and vegetable matter.
- **New projects:** These are either manufacturing or processing plants under construction or likely to be operational within the next five years.

For the 7th edition, the fertilizer plant data was updated between November 2022 and January 2023. A total of 19 fertilizer manufacturing plants and 134 fertilizer processing plants were mapped. 21 new facilities are expected to be installed in the region within the next 5 years. In addition, 20 organic fertilizer producing plants were also mapped. Information on all plants listed in this register can be found on the AFO official website: www.africafertilizer.org. Additional plants have been mapped using public information but have not been listed in this register.

SUMMARY OF PLANTS BY REGION

Region	Manufacturing	Processing	Organic	New	Total
East and Southern Africa	8	41	3	6	58
West and Central Africa	11	93	17	15	136
GRAND TOTAL	19	134	20	21	194

OVERVIEW OF FERTILIZER PLANTS IN SUB-SAHARAN AFRICA

MANUFACTURING PLANTS

There are 19 fertilizer manufacturing plants in SSA, excluding South Africa, out of which 5 produce nitrogen-based products and 9 produce phosphate-based products. Also included in this category are 4 plants producing lime supplements and 1 plant producing micronutrients. 20 other plants producing organic compost and fertilizers have also been mapped.

Nitrogen

Notore Chemical Industries Limited and Indorama Eleme Fertilizer & Chemicals Limited (located in River State) and Dangote Fertilizer Limited (located in Lagos) are currently the only plants producing urea in SSA, excluding South Africa. Other plants producing nitrogen-based fertilizers currently import ammonia to manufacture ammonium nitrate and ammonium nitrate-based fertilizers, and ammonium sulphate. They include Ambatovy producing ammonium sulphate in Madagascar as a byproduct of nickel production, and Sable Chemical Industries Limited producing ammonium nitrate in Zimbabwe.

Phosphates

There are 8 operational Phosphates mines in SSA, excluding South Africa, involved in the production of phosphate rock and phosphate-based fertilizer compounds. They are *Société d'Exploitation des Phosphates du Burkina* (SEPB) in Burkina Faso, Toguna Agro Industries in Mali, *Industries Chimiques du Sénégal* (ICS) and *Société Minière de la Vallée du Fleuve* (SOMIVA) in Senegal, *Société Nouvelle des Phosphates du Togo* (SNPT) in Togo, KEL Chemicals

Limited in Kenya, Minjingu Mines & Fertilizer Limited in Tanzania, and Zimbabwe Phosphate Industries Limited (ZIMPHOS) in Zimbabwe.

Potash

Currently, there are no potash manufacturing facilities in SSA, excluding South Africa, with several exploration mines and advanced stage projects in Central Africa, Eritrea and Ethiopia's Danakil Depression ongoing.

PROCESSING PLANTS

There is an installed blending capacity of individual plants ranging from 10 mtph to 200 mtph, and a granulation capacity of approximately 766,000 mtpy. These capacities are based on name-plate capacities. In this edition, we saw an increase in processing plants from 117 facilities in the previous edition to 134 facilities which has been primarily in West Africa.

SUMMARY TABLES

Tables 1, 2, 3 and 4 provide a summary of all the fertilizer **manufacturing facilities** in SSA, excluding South Africa, by nutrient categories. Table 5 and 6 provide a summary of all the fertilizer **processing facilities** in SSA, excluding South Africa. Tables 7 and 8 provide a summary of all proposed fertilizer manufacturing and processing facilities that are scheduled for installation and operation within the next 5 years.

Note: Capacities are expressed in metric tons per hour (**mtph**), metric tons per day (**mtpd**), and metric tons per year (**mtpy**).
